Cornell Invasive Species Forum - May 18th

Invasive species represent one of the greatest environmental challenges for the 21 century, causing tremendous losses in agriculture and wild lands. The control and mitigation of effects of invasive species requires not only an understanding of their basic biology, but also of the environmental complexity of the habitats and interactions in invaded areas. The focus of this forum will be on research at Cornell University, structured to inform and build collaborations at Cornell, inform community members of our efforts, and begin to help develop a strategic vision for the future. This campus event is being led by Anurag Agrawal of the Department of Ecology and Evolutionary Biology and hosted by the Center for the Environment. We are now assembling a list of potential speakers and interested people: Email [Paula Euvrard](#) to get on our list and receive further information directly.
